One complaint that we hear is that when a company needs to make a change to their website, they have to submit the change to their web designer or technology company, and wait for them to find the time to make the changes. Wouldn't life be easier if you could just do it on your own?

Watch this:

From the front end of your website, you log in:

A screenshot of a login form. It contains four elements: a text input field labeled 'Username', a text input field labeled 'Password', a checkbox labeled 'Remember Me', and a button labeled 'Login'. The entire form is enclosed in a red rectangular border.

Once you are logged in, your content articles become editable from the front end-No code!
You'll see the little pencil and paper icon, and that means you can begin the editing process.

Is Your Website This Easy To Update?

In 2004 Squish began as a design company, but in the past three years we have yet to complete a project that was limited to design work. We create "smart" sites. We help present, plan, and execute the cohesive use of web technology including:

- a content management system
- blogs
- a robust search engine
- newsletters
- and quite a few additional components.

Along with the creation of "smart" sites, Squish implements open source software custom to fit many small to medium size corporation's needs.

Submit an Article

The screenshot shows a web editor interface. At the top, there is a title field containing "More than just design, we Develop!" and "Save" and "Cancel" buttons. Below the title is a toolbar with various icons for text formatting (bold, italic, underline, font color, background color), alignment, and other functions. The main editing area contains the same text and list as the previous block. To the left of the main text, there is a preview window showing a website layout with a sidebar and a main content area. The preview window displays the text and list in a styled format, including a header "INDIANA LAWYERS FOR SOLDIERS" and a profile picture.

All things come with a price tag, but the cost of a content management system is a small price to pay for the ease of updating your website.
